

Problem

 $\text{Chef gave you an infinite number of candies to sell. There are N customers, and the budget of the i^{th} customer is A_i rupees, where $1 \leq A_i \leq M$. }$

You have to choose a price P, to sell the candies, where $1 \le P \le M$.

The i^{th} customer will buy **exactly** $\lfloor \frac{A_i}{P} \rfloor$ candies.

 $\text{Chef informed you that, for each candy you sell, he will reward you with C_P rupees, as a bonus. Find the {\color{red} \textbf{maximum}}$ amount of bonus you can get. } \\$

- We are not interested in the profit from selling the candies (as it goes to Chef), but only the amount of bonus. Refer the samples and their explanations for better understanding.
- ullet [x] denotes the largest integer which is not greater than x. For example, $\lfloor 2.75 \rfloor = 2$ and $\lfloor 4 \rfloor = 4$.

Input Format

- The first line of input will contain a single integer T, denoting the number of test cases.
- . Each test case consists of multiple lines of input.
- The first line of each test case contains two space-separated integers N and M, the number of customers and the upper limit on budget/price.
- \circ The second line contains N integers A_1, A_2, \ldots, A_N , the budget of i^{th} person
- $\circ~$ The third line contains M integers $C_1,\,C_2,\ldots,\,C_M$, the bonus you get per candy, if you set the price as i

Output Format

For each test case, output on a new line, the maximum amount of bonus you can get.

Constraints

- $1 \le T \le 10^4$
- $1 \le N, M \le 10^5$
- $1 \le A_i \le M$
- $1 \le C_j \le 10^6$
- ullet The elements of array ${\it C}$ are not necessarily non-decreasing.
- \bullet The sum of N and M over all test cases won't exceed $10^5\,$

Thus, the answer is 20.

Test case 2:

- If we choose P=1, the number of candies bought by each person is $[\lfloor \frac{1}{1} \rfloor]$. Thus, our bonus is $1\cdot 4=4$.
- If we choose P=2, the number of candies bought by each person is $[\lfloor \frac{1}{2} \rfloor]$. Thus, our bonus is $0 \cdot 1 = 0$.

Thus, the answer is 4.
